Automation QTP

UTILITY RUNTESTSET.EXE NOT WORKING WITH ALM QC V11

For Automation Geeks | By Bharat Kakkar

$\mathcal{H}$ave you just migrated to Quality Center version 11 and now unable to use RunTestSet

utility? Does your log file says "Error: Error: Class not registered".

Here is the solution to get this resolved and get going with the test set execution once again.

1. Navigate to control panel > Program and features

2. Uninstall "QC Client Side" installation and any other installation which belongs to older version of QC (if exist)

3. Delete folder named TD80 from %temp% (type %temp% in run box)

4. Open IE and navigate to QC 11 URL

5. Navigate to Add-in Page underneath help menu.
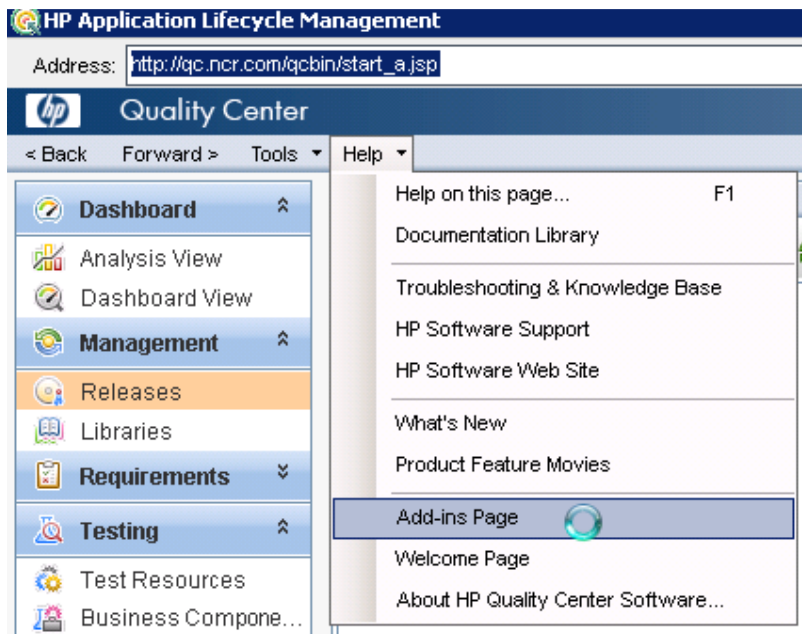

6. Download and install "QC connectivity" add-in

7. Install client registration from the same page

Give it a try now if it still fails

1. Make sure you close all QTP and associated applications like scheduler/ALM explorer etc.

2. Navigate to "C:\Program Files (x86)\HP\<QuickTestProfessional directory>\bin\mic.ini" or "C:\Program Files\HP\<QuickTestProfessional directory>\bin\mic.ini"

3. Add/update the [RemoteAgent] section as follows:

```
RunQTPHidden=0
LeaveQTPOpenAfterTestSetEnd=1
ShowBallon=0
```

4. If that still doesn't work

   Resister following files

   a. OTAClient.dll

   b. wshom.ocx

   c. scrrun.dll

   using regsvr32 command.

   You should be ok to go ahead with the execution.
