# LOCKED SYSTEM N AUTOMATING UI TESTS – DIABLESCREENSAVER

For Automation Geeks| By Bharat Kakkar

$\mathscr{H}$ave you written a script and your system locks due to screen saver settings, causing

the scripts to fail? Are you unable to change the screensaver settings to avoid launching the screensaver? Are you in middle of a presentation and all of the sudden your laptop's screen darkens? Do you need to keep moving mouse to keep your system alive?

Fortunately, **DIABLESCREENSAVER** has a solution. If your screensavers settings have been disabled this small utility will let you unlock the settings and disable the screensaver.

All you have to do is to run the setup and follow the instructions. The utility will disable the screensaver and also unlock the setting for you. It will set your screensaver to "none".

Where would I get **DIABLESCREENSAVER** from?

You may download the utility from www.technodivine.com/downloads

This utility didn't work for me?

If this utility does work for you, probably the restrictions on your system are been implemented through global policy, wherein we can't change settings without domain Admin's permission.

> **What should I do now ☹ ??????**
> ✓ ☺ Don't worry Technodivine has another solution for you.. Keep reading the upcoming articles.
